

Deploying Tungsten Fabric on Kubernetes via Helm

Fawad Shaikh, Sr. Solutions Architect

Agenda

- Tungsten Fabric Architecture Overview
- Tungsten Fabric Kubernetes Support
- What is IBM Cloud Private (ICP)?
- Tungsten Fabric/Contrail integration with ICP
- Demo – Deploying Tungsten Fabric on K8s via HELM

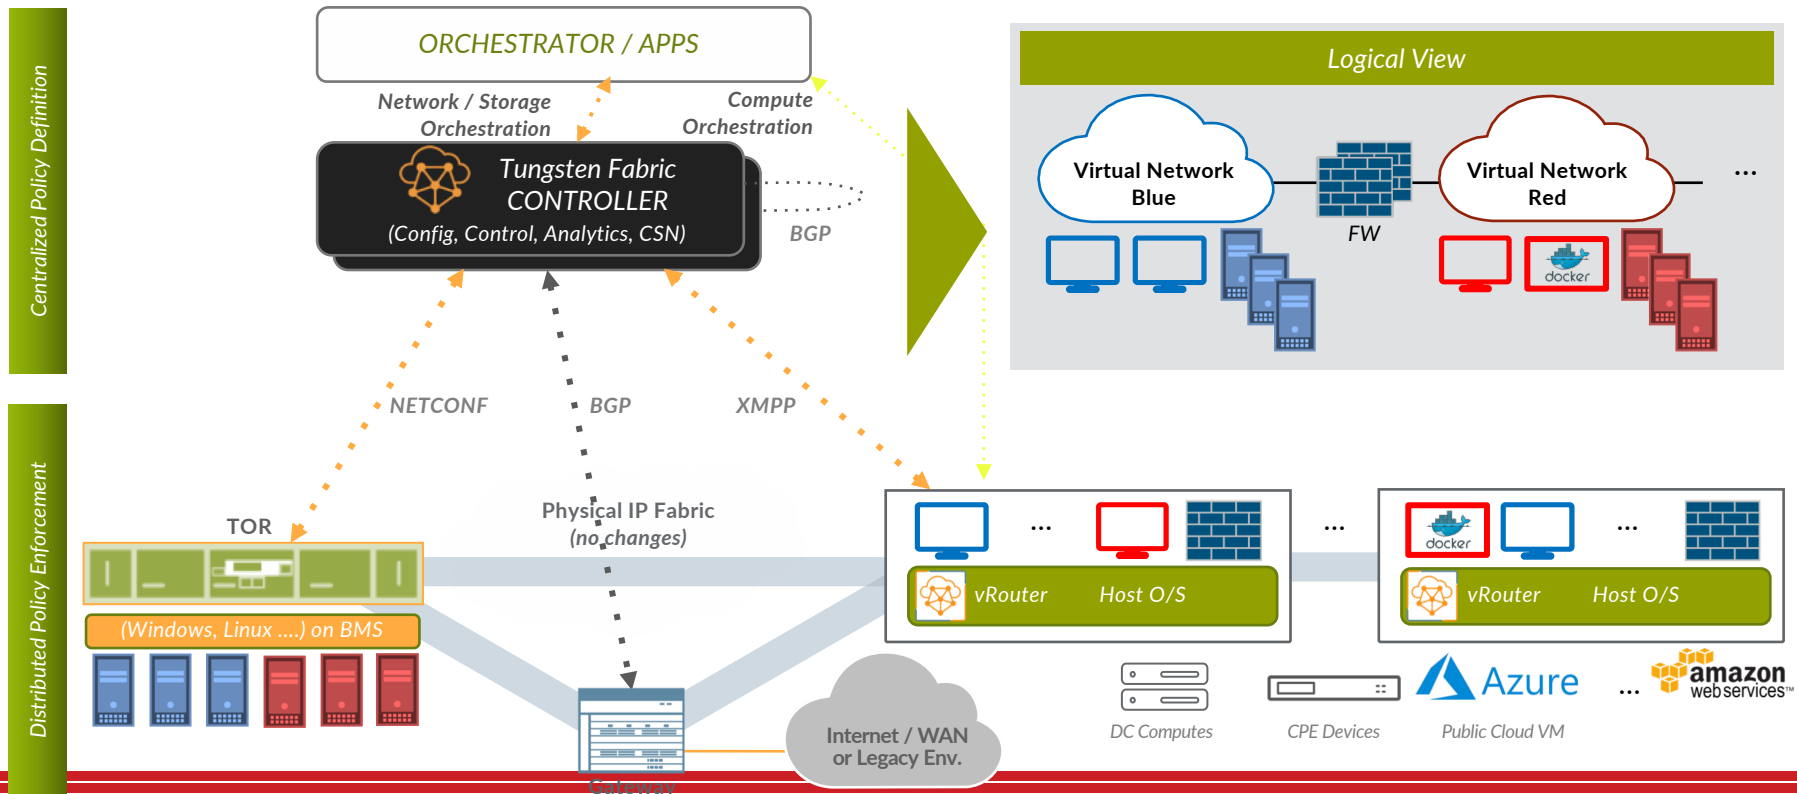

+

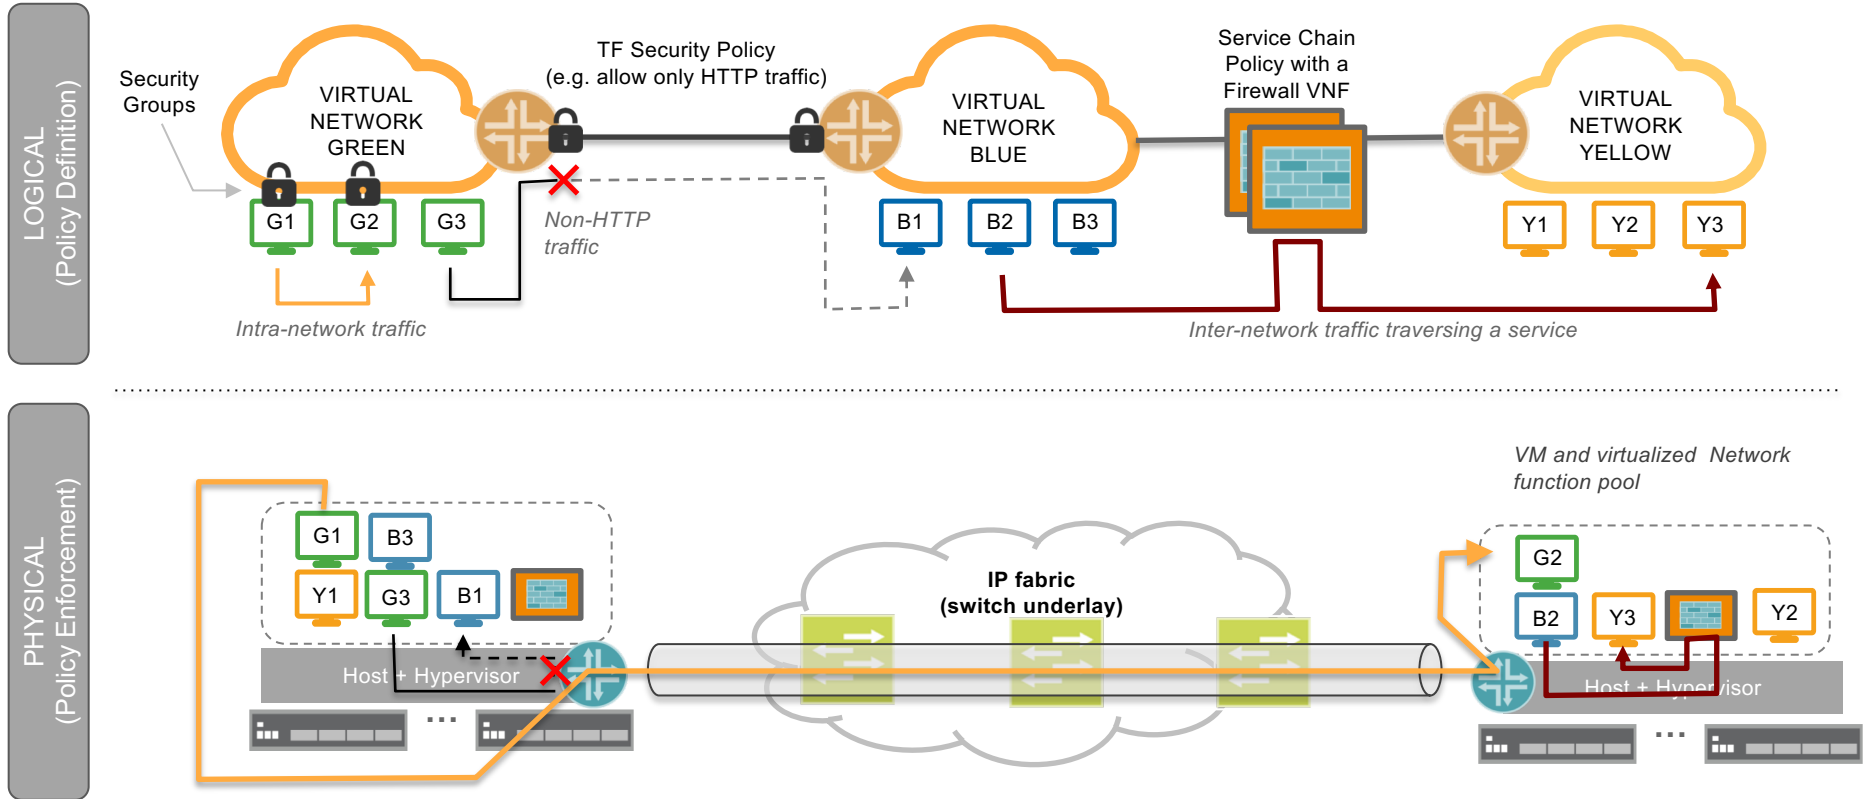

+

Architecture Overview

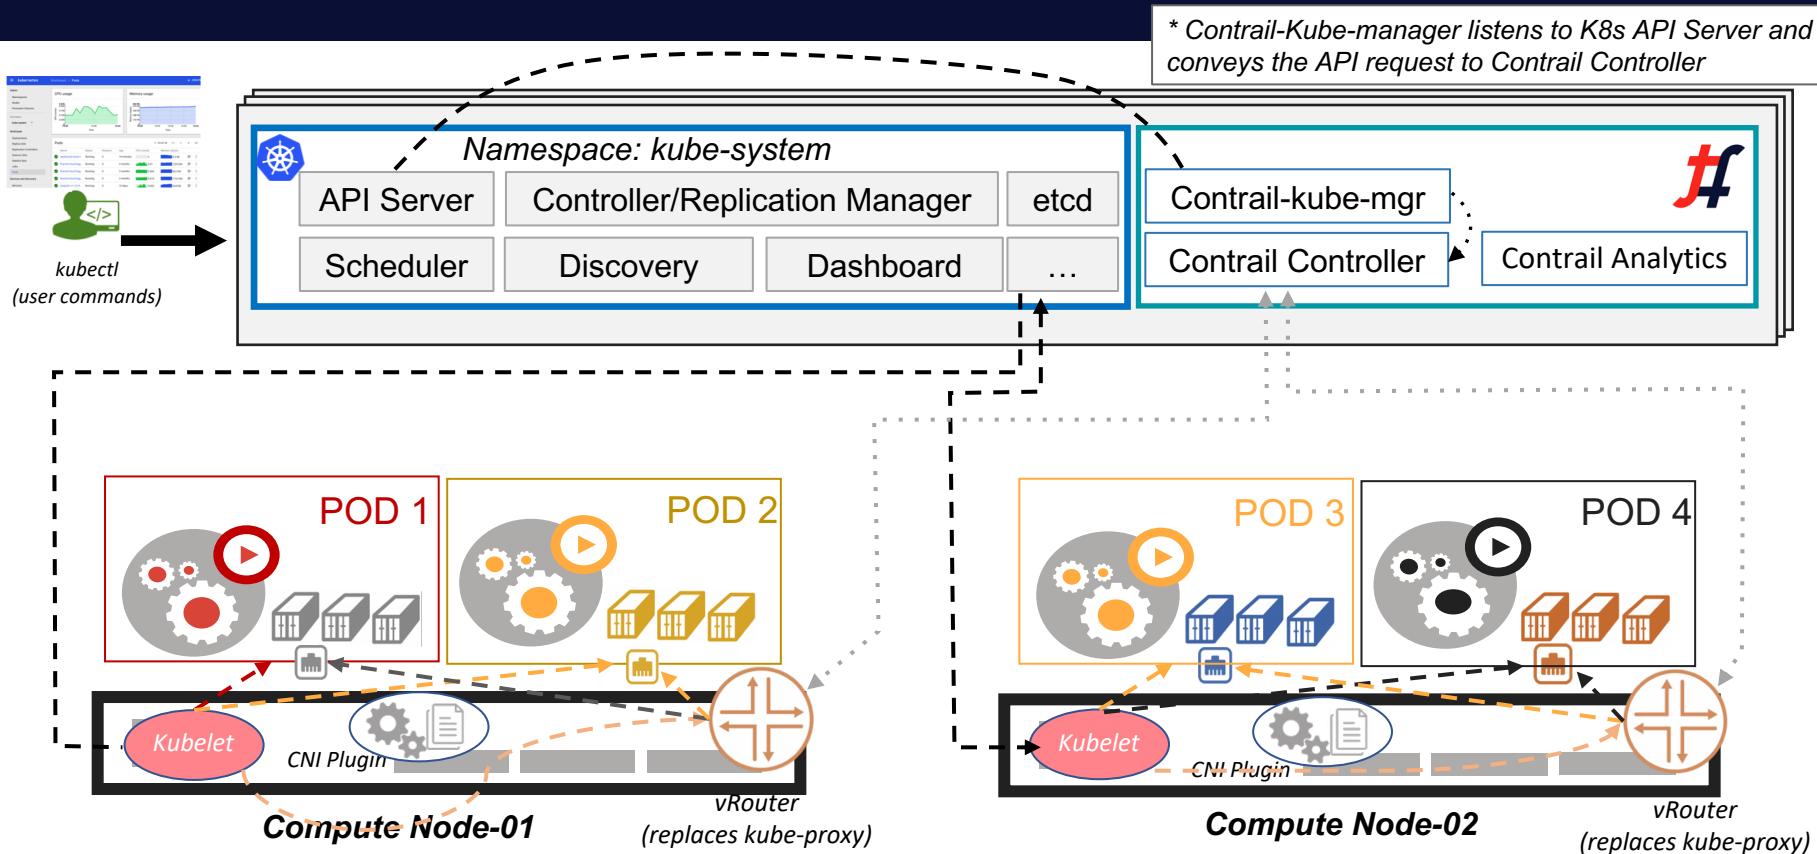

Visualizing Tungsten Fabric's Operational Effects

Tungsten Fabric Kubernetes Support

Tungsten Fabric Integration with k8s

Tungsten Fabric Evolution to Microservices

- Contrail-Control (5 daemons)
- Contrail-Config (8 daemons)
- Contrail-Analytics (5 daemons)
- Contrail-WebUI (4 daemons)
- Contrail-DB (3 daemons)
- Contrail-vRouter (3 D) + Kernel/DPDK (FP)

Contrail Controller: 2n+1

OR

BMS

**Contrail 1.X/2.X/3.X
BMS or VMs base
(SDN Controller)**

Multiple Process running in one
Container (FAT Containers)

**Contrail 4.X (Containers)
BMS or VMs base
(SDN Controller)**

DaemonSet, Ingress Services with Host
Networking
with choice of run single or multiple
containers per PODs

27-30 Containers Images

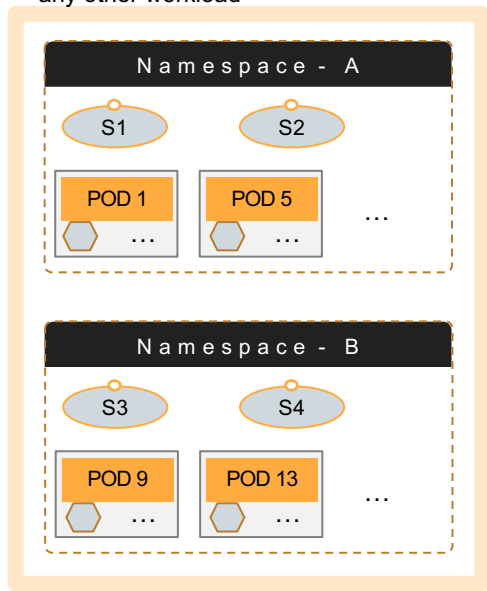

**Contrail 5.X (Containers)
Microservices
(SDN Controller)**

Levels of Isolation - Multitenancy

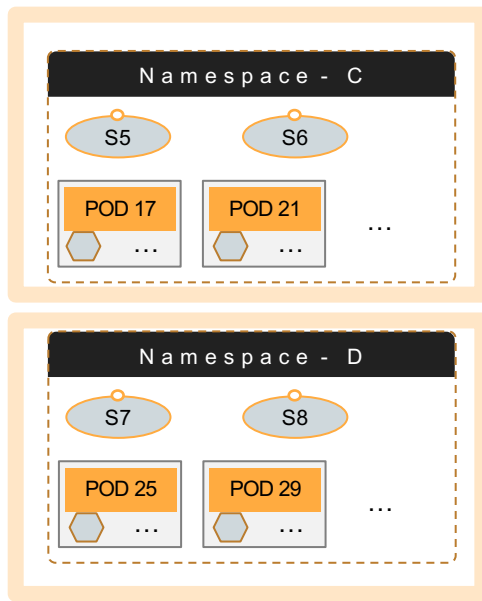

DEFAULT CLUSTER MODE

- This is how Kubernetes networking works today
- Flat subnet where -- Any workload can talk to any other workload

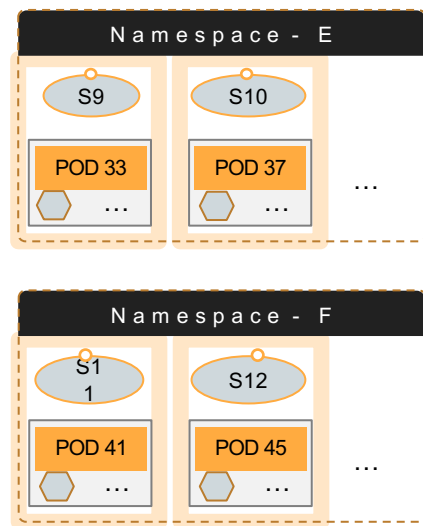

NAMESPACE ISOLATION

- In addition to default cluster, operator can add isolation to different namespaces transparent to the developer

POD / SERVICE ISOLATION

- In this mode, each POD is isolated from one another
- Note that all three modes can co-exist

IBM Cloud Private

IBM Cloud Private (ICP)

Platform to develop **modern applications** based on **micro-services architectures** behind the enterprise's firewall while **consuming IBM's catalog of middleware and software**

IBM Middleware, Data, Analytics and Developer Services

Cloud-enabled middleware, application runtimes, messaging, databases & analytics to optimize current investments and rapidly innovate

Core Operational Services

To simplify Operations Management, Security, DevOps, and hybrid integration

Kubernetes-based Container Platform

Industry leading container orchestration platform across private, dedicated & public clouds

CLOUDFOUNDRY

Cloud Foundry

For prescribed application development & deployment

Terraform

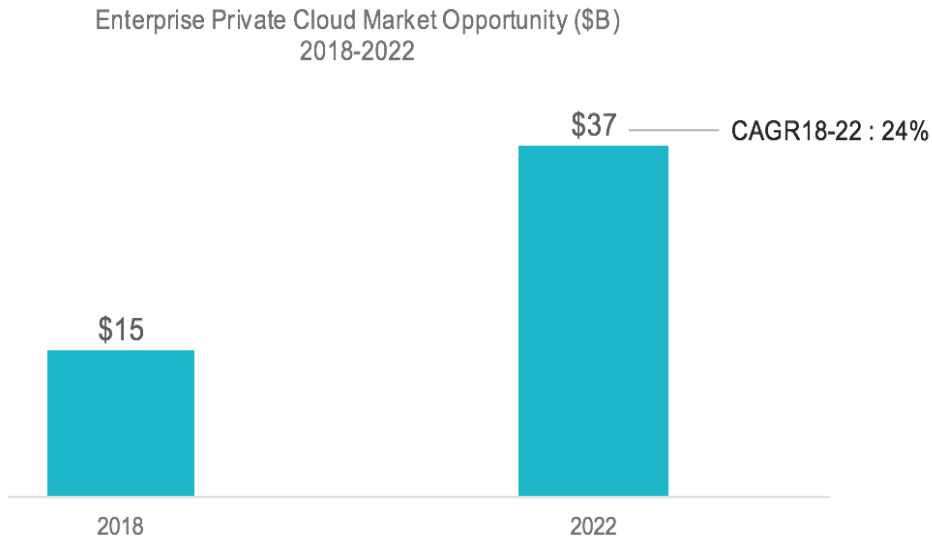

Infrastructure as Code for provisioning on public and on-prem cloud

Runs on existing IaaS or hardware from IBM POWER and Z, Dell, Cisco, NetApp, Lenovo, Canonical ...

Private Cloud Market is Growing

Compliance, security, support and services

Sources: IBM Market Development and Insights

- **Private Cloud** adoption is **growing** as enterprises are concerned about **compliance, security, support and services**
- Enterprises are starting to modernize its **core applications** as **Cloud Native** leveraging a micro-services architecture and cloud services
- **Private Cloud** is a step towards achieving a **Hybrid** and **Multi Cloud implementation** standardizing the **DevOps**

A photograph of a server room with rows of server racks on both sides and a door in the center background. The room is brightly lit with overhead lights. A semi-transparent dark grey box is overlaid on the left side of the image, containing the text.

IBM Cloud Private (ICP) and Contrail

IBM Cloud Private (ICP)

IBM Cloud Private is a **platform** to develop **modern applications** based on **micro-services architectures** behind the enterprise's firewall while **consuming** IBM's catalog of **middleware and software**

Kubernetes-based container platform

Industry-leading container orchestration platform across private, dedicated and hybrid clouds

Common services

To simplify hybrid automation, integration, management and developer experience

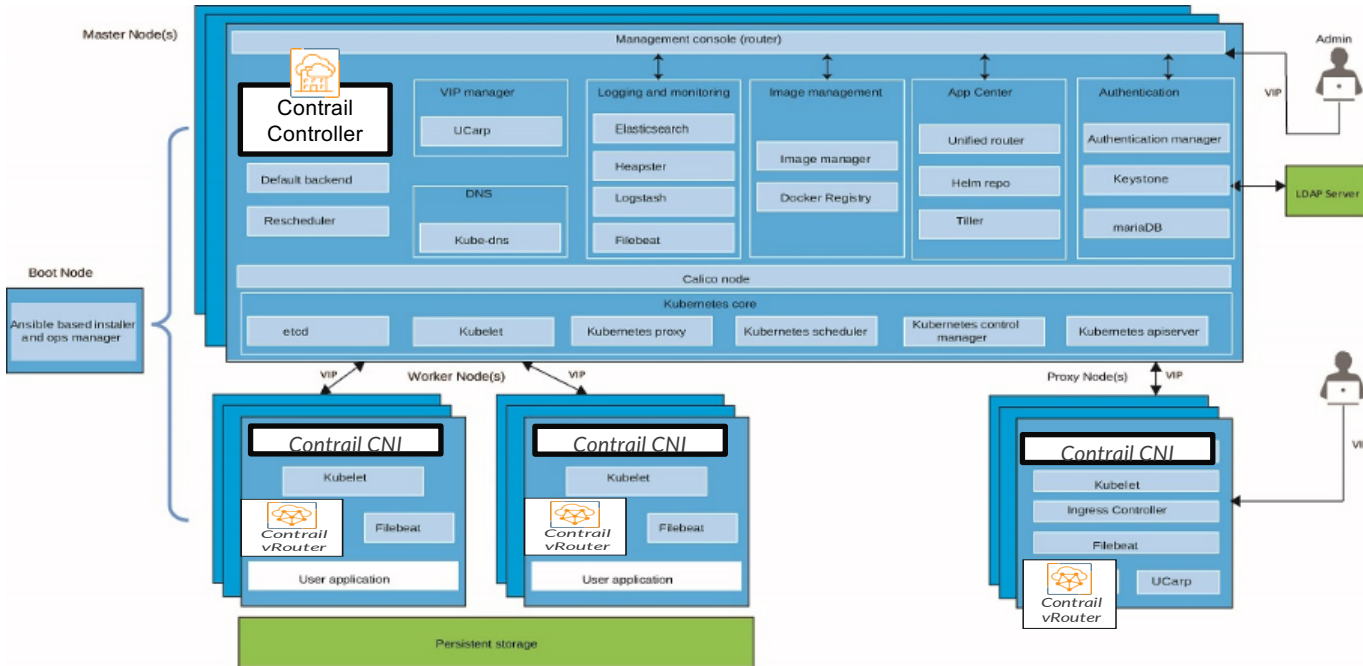

Cloud Foundry

For rapid application development and deployment

IBM Middleware, data and analytics services

Cloud enabled middleware, databases and analytics to leverage and optimize current investments

IBM Cloud Private (ICP) and CONTRAIL

Boot Node: Used for running Only one boot node is required for any cluster.

Master Node: Provides management services and controls the worker nodes in a cluster.

Worker Node: Provides a containerized environment for running tasks.

Proxy Node: Transmits external request to the services created inside your cluster.

Optional Nodes: Management, Vulnerability Advisor (VA), etcd. ...

ICP bring up

Step: 1

Physical Infra

- Install OS on all the host and setup environment
- Install ICP essential software on all the nodes
- Docker
- Go api
- Git
- Kubernetes
- Helm (on host network)
- Bring up CNI via HELM

Step: 2

Platform/Tools/Config

- Maria DB
- AWS S3
- Authentication
- Analytics
- Log Stash
- ELK stash
- RDBMS
- Identity and access
- Metering
- Etc...

Step: 3

Services

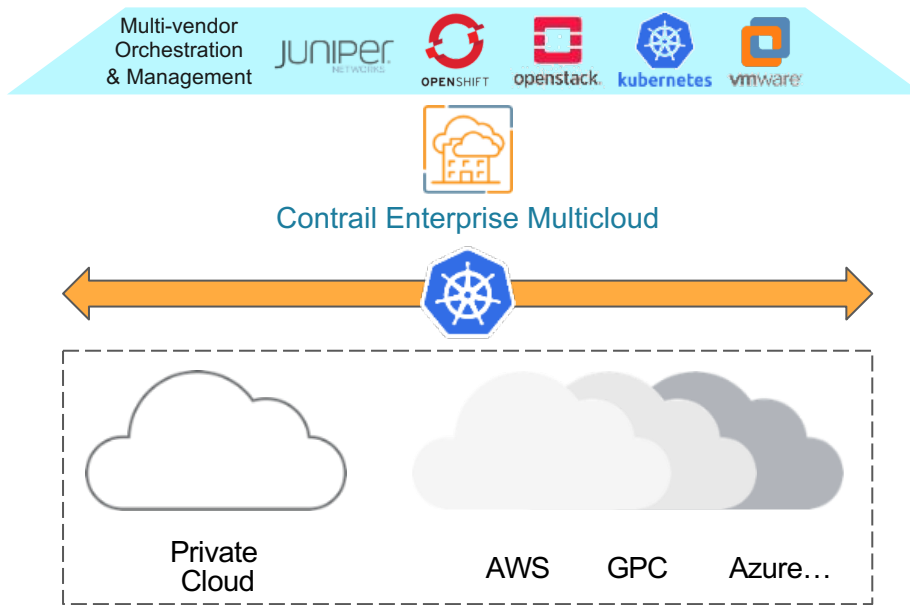

- Customer applications
- VNF's
- HRC
- Banking applications etc

Nodes

Role	CPU	RAM	Disk	OS
Master	24	64	500	RedHat7.5
Proxy	24	64	256	RedHat7.5
Compute1	24	64	256	RedHat7.5
Compute2	24	64	256	RedHat7.5

Role	IP	GW		
Master	10.11.10.90	10.11.10.254		
Proxy	10.11.10.91	10.11.10.254		
Compute1	10.11.10.92	10.11.10.254		
Compute2	10.11.10.93	10.11.10.254		

Use Case: Kubernetes Security and Networking

Implement Kubernetes

- Control and security for Kubernetes is particularly painful
- Isolate K8s Pods/containers to provide segmentation and security
- Enhance K8s networking service to provide high performance connectivity
- Apply and re-use policies from any environments including K8s
- Support multiple K8s deployment types - K8s on BMS, OpenStack, Public Clouds

One platform to connect, secure, and monitor Kubernetes environment

IBM Cloud Private Competitor Landscape

SDN

NSX

INFRASTRUCUTRE

VTEP through QFX

IBM Cloud Private Landscape

		 CONTRAIL
Open Source	Project CALICO	
Multitenancy	Packet filters implemented in Linux bridges	Each tenant has its own VRF
DDI Services	Only DHCP on OpenStack	Fully supported
Security Policies	Packet filters implemented in Linux bridges	Supports Network Policy enforcement extending the label based firewall policy to OpenStack, VMWare, and Bare Metal
Analytics		RT visibility, alerts and overlay/underlay correlation
Service Chaining		NG-FW with vSRX
Fabric Management		Data Center and Gateways
UI		Contrail Command
Bare Metal support		Contrail

Deploying Tungsten Fabric on K8s via HELM

Demo

Topology

Users

Helm for Deploying Tungsten Fabric and Applications

1. Scale up/out
2. Version control
3. Upgrade

Tungsten Fabric CTL 

Kubernetes Master 

Helm deployer 

Policy Framework

5 step build out

1. Install Kubernetes
2. Install Helm
3. Deploy Tungsten-CNI via Helm
4. Deploy Tungsten-Web-UI via Helm
5. Deploy Applications via Helm

App: RedMine-1
Deployment: development
Tier: web, app, db
Site: USA

 vRouter  kubelet

Compute -1

App: RedMine-2
Deployment: production
Tier: web, app, db
Site: France

 vRouter  kubelet

Compute -2

Try Tungsten Fabric
