2019-07-24 Docs Project Meeting

Date

24 Jul 2019

Attendees

- VM Brasseur
- Darien Hirotsu
- Fayaz Akhtar
- Tatsuya Naganawa
- Will Stevens
- Syed Ahmed

Agenda

- Action items from 2019-07-10 Docs Project Meeting (no need; all complete)
- Review Docs Jira tickets
- tf-transitional-contrail-docs pull requests: https://github.com/tungstenfabric/tf-transitional-contrail-docs/pulls
- Docs Census
- Quick notes
  - Relationship between Docs Census & Website Refactor
- Contributing for the GSoC documentation

Minutes

- Jira tickets
  - Did anyone get the chance to try working on any Jira tickets?
    - Will bumped some CLA tickets, but didn't get the chance to work on any
  - Please try to carve out a bit of time for this in the next week or so
- tf-transitional-contrail-docs pull requests
  - Syed & Tatsuya-san have reviewed some
  - Update needed for one of them; VMB will try to do today
- Docs Census
  - Have an initial version in place
  - Are a few things missing that need to be added yet
    - Helm deployer, for instance
  - Architecture between 1-step deploy and Ansible deploy are completely different (k8s vs control plane in Docker made into CNI available to k8s)
    - Will to create a diagram for each of these
    - Also add some more commentary on Will's experience
  - VMB: Have enough info to get started w/planning a docs reorg?
    - Will: Think so, yup (Syed: +1)
  - Syed: Concerned that it's still hard to tell what's important for what
    - VMB: Definitely; reorg needed
  - VMB will start reviewing the census for reorg
    - Make docs repo the single source of truth
    - Will: Contributor docs should be a high priority
- Website refactor
  - FYI: Lisa will use the docs census to help w/the website refactor
- Release notes
  - DH volunteered to write these for 5.1. Format?
  - VMB points to https://github.com/tungstenfabric/tf-transitional-contrail-docs release notes stuff as a starting point
  - How to generate release notes going forward?
    - Automate from Jira tickets & commits?
  - VMB suggests a blueprint/ticket to capture an initial proposal
  - TN points out there's a public spec repository: https://github.com/Juniper/contrail-specs
    - Most of the features are in here, can refer to them
    - Note that some features are proprietary, so from the TF side we would have to determine which ones are internal to Juniper versus community
    - Still being maintained
      - Releases within Juniper are now monthly
      - The convention is RYYMM
  - VMB is having a call w/Sukhdev & Carlo later today about the blueprint process; more info later
- GSoC contribution
  - How can Fayaz contribute?
  - https://jira.tungsten.io/browse/TFB-1449?filter=10100
    - Notes from when VMB was doing initial gerrit commits

Action items

- [ ] Will Stevens sync with Daniel Pono Takamori on gating based on a Jira ticket so Will can document the process.
