

# 2019-05-21 Infra WG Meeting notes

## Date

21 May 2019

## Attendees

- [Daniel Pono Takamori](#)
- [Casey Cain](#)
- [@alex levine](#)
- [@andrey](#)
- [Will Stevens](#)
- [Carlo Contavalli](#)

## Agenda

- Review action items from [2019-05-14 Infra WG Meeting notes](#)
- Review [Infra Jira tickets](#)

## Minutes

- Pono: action items from last week
  - still need to investigate Jira notifications
  - and port the LF docs into the TF confluence for CLA stuff
  - There are Windows Server licenses in Vexxhost
  - Vexx already on ssds + ceph so can't really make any faster
- Alex: Zuul is working in Vexx!
  - almost on par with juniper internal performance
  - sanity and unit tests passing
  - reflecting reviews from juniper into gerrit
- Will: asking about vexx setup
  - Alex: build in parallel against juniper
  - Will: so using the same repos as juniper but on the new CI system
  - Andrey: need to maintain internal repo but can't merge right now
- Pono: let's import a repo to gerrit.tf.io to start testing sooner rather than later
  - Alex: repos still named contrail, won't be able to create reviews
  - Andrey: yeah, just for sending reviews
  - Will: just standard mail stuff
- Will: Does the new CI generate artifacts to be published?
  - Alex: will create artifacts and containers and can publish anywhere + dockerhub
    - still need more testing for release procedures
  - Will: this is for nightly builds? contrail dockerhub?
  - Alex: jobs create artifacts for publishing
  - Will: artifact release thoughts will come up in TSC
  - Will: docs repo moved yet?
  - Pono: will be moved before TSC meeting this week
  - Will: Use docs repo to validate in gerrit and get TF docs up to date instead of opencontrails

## Action items

- ☑ Daniel Pono Takamori smtp server for mail on gerrit
