

2019-06-25 Infra WG Meeting notes

Date

25 Jun 2019

Attendees

- Daniel Pono Takamori
- Casey Cain
- @alex
- @Garry Greenburg
- Jakub Bielecki

Agenda

- Review action items from [06-18 Infra WG Meeting notes](#)
- Review [Infra Jira tickets](#)
- Update on CI/CD
- Update on repo move

Minutes

- **Action Items**
 - "Alex will reply to the [mailing list](#) about Gerrit/GitHub"
 - Agreed in the short term that Gerrit is still the best path forward
- **Jira Tickets**
 - No new ones but <https://jira.tungsten.io/browse/TFB-1441> was created
- **CI/CD**
 - alex: trip to juniper was very good!
 - just plug it in!
 - zuul is hooked up to TF gerrit!
 - on track for testing
 - some builds are still very long, 2-4 hours closer to 3
 - precommit and sanity tests
 - 14/100-something tests
 - whole set takes about 6 hours
 - hopefully can get to around 2 hours, but 3 is more realistic
 - full build used to take 7 1/2 hours
 - unit tests are not optimized
 - pono: are you working on optimizing builds or can community help?
 - alex: anyone can theoretically help, but not easy yet
 - parallelizing/ precaching in openstack
 - preconfiguring networking is a huge overhead
 - <https://github.com/Juniper/contrail-test>
- **Repo Move**
 - alex: still up to [Carlo Contavalli](#)
 - cautiously moving
 - Juniper is moving from zuul to jenkins internally, so there are some thoughts about that coordination (tangential to TF)
 - design idea: everything separate from CI
 - devstack, devend, test all different components so can be tested separately outside of zuul
