

Performance & Scalability Numbers for TF

A single page to start collecting information about performance of TF. We'd like to collect and publish these in a single resource.

What numbers would we like to see?

- Scaling Numbers for the Control Plane:
 - Looks a little dated and specific to OpenStack, but see section 2.1 from Hartmut's Doc:
 - <https://github.com/hartmutschroeder/contrailandrhosp10#21sizing-the-controller-nodes-and-vms>
- There is a document on running the vRouter standalone (no control plane) and has some performance analysis here: [vRouter](#)
