

# 05. Release Distributions Proposal

## Release Distributions

- **Stable Distribution:** A distribution containing the collection of Stable Features as they are compiled into the Stable Release Feature Repository hosted in the Integration project.
- **Service Release:** A distribution containing the collection of both Stable and Extended Features as they are compiled in the Service Release Feature Repository hosted in the Integration project.

## Naming convention proposal

**TFR-YYMM-SUFFIX**, where:

- TFR - TungstenFabricRelease
- YYMM - two last digits of the year and two digits of the month
- SUFFIX - mark the status of the release:
  - a - for alfa
  - b - for beta
  - rc - for release candidate
  - r - for the final release
  - rf - service fix

examples:

- TFR-2007-b1 - first beta release of 2020.07 release
- TFR-2007-rc - the release of release candidates for 2020.07
- TFR-2007-r - final release for 2020.07 release
- TFR-2007-rf1 - first patch for the final release for 2020.07

Questions:

How we will mark releases if we fork them into two or more branches? Shouldn't we rather use the major.minor.branch naming convention? (e.g.
