

Proposing a new Project

If there is no matching project you would like to support, and you see an opportunity to provide something new, interesting, valuable to the Tungsten Fabric product, you may propose a brand new project which will fulfill expectations.

- Proposal for a new project should consist of a proper detailed description according to the below template. This will help the Technical Steering Committee to assess and approve your proposal.
 - Use this page as a template and create a Jira ticket with the general information below on the [TF Community Jira](#).
- Then link to the Jira ticket on this page: [Project Proposals](#).
- Finally, email tsc@lists.tungsten.io with the link to your Jira ticket for Project Proposal.
 - The TSC will schedule an opportunity for you to provide a deep dive into your project proposal on the next available Technical Work Stream call.
 - Barring any backlog, the TSC should then vote on the approval of your project 2 weeks from the time that you submitted the Jira ticket and notified the TSC of the proposal on the mailing list.

Item	Description
Name	<i>Name of the Project</i>
Description	<i>Description of the goal, purpose, business needs/requirements, reasons for the creation of the new project</i>
Responsibility for/Vision	<i>What is the full scope of your proposal? What other components might be affected by this proposal?</i>
