2020-04-09 Docs Project Meeting

Date

09 Apr 2020

Attendees

- VM (Vicky) Brasseur (she/her)
- Daniel Pono Takamori
- Abirami Thangavel
- Casey Cain

Agenda

- Review action items from 2020-04-02 Docs Project Meeting
- What does the docs workflow look like in a post-Gerrit world?
    - See email: https://lists.tungsten.io/g/docs/message/212

Minutes

- Action items
    - Casey: Fixed the problem with Jira not getting the Gerrit patch notifications
        - Pono: Needed a different SSH key
- What does the docs workflow look like in a post-Gerrit world?
    - Pono: The move to GitHub shouldn't be too bad
        - Major blocker was Zuul
        - Jenkins now makes it a lot easier
    - Pono: Suggests a trial period, doing work on both Gerrit & GitHub for a while
        - Would have to manually replicate patches
    - VMB: Assumed docs would just be a guinea pig, no replicated patches?
        - Pono: Could do that, too
    - Casey: Also interested in the workflow
        - Andrey said on TWS call that could do the parallel patches
        - TWS call showed devs are A-OK with the transition
- Review of the workflow email
    - Patch submitted as a PR
    - Could build using Jenkins, which could report to the PR w/problems
        - Could do some more sophisticated checking here
        - VMB: Sophisticated could be good, but will add in a separate pass afterward
    - Then review, merge, publish
- Review expectations in a GitHub world?
    - Mapping +1/-1, +2/-2?
    - Pono: GH has an approve system so can block for a certain number of reviews
        - Approve/reject (no +2 concept)
        - Can block on approves
        - Can block on bot output
    - Also has a codeowners file, so folks in there can get notified if a patch arrives
- Build with Jenkins rather than RTD?
    - More & better checks
    - Check for syntax & other linting before anything gets published
    - Could potentially do a preview version of the docs to review, too   **We'll probably want this**!
