

2019-03-19 Infra WG Meeting

Attendees

- VM (Vicky) Brasseur (she/her) (Juniper)
- Daniel Pono Takamori (LF)
- Will Stevens (CloudOps)
- Jarek (Codilime)
- Sukhdev Kapur (Juniper)
- Edward Ting (Lenovo)

Agenda

- Update from Jarek
 - Was hoping to get info from Juniper about future state of repos & CI systems
 - Working on migrating repos from review.opencontrail.org to gerrit.tungsten.io
 - Renaming is complete
 - Squashing of commits complete
 - Repos set up by LF team
 - Ready to push the code to the new gerrit
 - Waiting on decisions about the target state of the repos
 - Heard want to maintain some sort of CI system inside Juniper...?
 - Heard want to maintain repos in Juniper along with ones in LF...?
 - Need to know about how the Juniper dev workflow will go
 - SK: Once everything is moved, all dev moves TF repos
 - SK: Only proprietary code remains inside; there will be no duplicate repos or CI
 - Jarek: A-OK, but will need confirmation from Abhay
- SK: Status of Jira tickets?
 - Did these get moved...?
 - VMB: Thanh did this in December.
 - SK: Have now three systems...LP (now read-only), JNPR Jira, TF Jira
 - Apparently there are lots of tickets in JNPR Jira that should be moved to TF Jira
 - pono: Need to figure out how to coordinate migrating those; can select certain tickets, DB dump, re-import
 - SK: Lots of confusion w/in Juniper
 - Lots of resistance to reviewing tickets & flagging as meant for TF
 - Will sit down and talk to Scott & Bill about this
- VMB: Need them to start working in the TF Jira ASAP
 - SK: Will work with Scott to sort this out
 - Will be a hard line where all tickets are moved AND all TF tickets go to the TF Jira
- Handover of public CI system? When is this happening?
 - Repos need to move first
 - Then can hand over the CI to Alex's team
 - SK: This is too risky; should get the CI system up and running first to ensure it will work before handing over the CI
 - Have them running simultaneously for a while, will fully cut over at some point after confirming that things work
 - JNPR management want zero downtime/outage. Must be totally seamless.
 - Jarek: Hadn't heard this plan yet but every step of moving the repos has zero downtime as a top priority
 - For instance, first will move the repos but **not** move the CI yet, having set up a Zuul in the meantime
 - Then will connect to the new Zuul in parallel
 - Should then shut off after things are confirmed as working
 - pono: Need a ticket filed to get Zuul set up in Vexxhost
 - helpdesk@tungsten.io
 - Should get Alex to do this
- Jarek: Migrating users/permissions to TF Gerrit
 - SK: Working to get the list of these folks; just received it on Monday
 - Spreadsheet of all repos, names of them before/after moves, folks authorised to approve/reject code
 - Need to prune that list then can send it on
 - Send it to...whom?
 - Jarek: We need their LF IDs for this, then they also need to sign up to Gerrit
 - SK: Already talking to folks about this
 - pono: Just need an LF ID both for Jira and Gerrit
 - LF IDs are easier for Jarek to add users to Gerrit
 - VMB: Can email work instead? Very difficult to track down LF IDs
 - Jarek: Dunno, really
 - Jarek & pono: Everyone needs to log into Gerrit first before the transition
 - SK: So helpdesk can't just import these things from a spreadsheet?
 - Jarek: No, can't add people in advance before they log into Gerrit
 - Once they've logged into Gerrit, the account exists and then people can be given authorisation to +1 or +2
 - So can add authorisations from the sheet
- Jarek: What's the process for giving folks +1 or +2 in the future?
 - SK: Governance doc talks about this; will be following this going forward

Minutes

See above. 😊

Action items

- Sukhdev will sort out the Juniper process with Scott and Bill
 - VMB will ask Alex & team to file the ticket to get Zuul set up at Voxhost
 - Emailed Alex, Cc'ing pono & Randy
 - VMB to get a proper LF Zoom link on this call (we got dropped because the host didn't show up)
 - Emailed ccain (Cc tsc@) asking for this change
- pono will ask Thank about whether email will work for Gerrit or if it won't work at all w/o LF ID
pono: emails will work!
