

# 2019-03-22 OPNFV-TF Meeting notes

## Date

22 Mar 2019

## Attendees

- VM (Vicky) Brasseur (she/her)
- dmcbride
- alevine

## Agenda

- Update on f2f meeting last week
  - Can't do Hunter release, so not signing up committers for it
  - Need commitment/decision on how many people to commit to this work
- Moving forward
  - Architectural calls/meetings to discuss ways to integrate TF with XCI
  - Two methods for that
    - Openstack Ansible tons of resources & this project is now obsolete
      - Pre-Kolla, Pre-Docker Ansible for Openstack, superseded by other things (Kolla & Docker containers)
    - Kubespray
  - DM: Airship...?
    - AL: Working on integrating TF & Airship for JNPR
      - Have nothing against it
    - But opinion of Fatih is that Helm is too buggy for this right now; don't want it in XCI
  - Could also allow vendor installers inside XCI
    - Would get Contrail into XCI in no time this way
    - Faster/easiest way
    - Has architectural disadvantages
      - Deteriorates cleanness of approach & tooling for XCI
  - Integrate TF into Kubespray
    - Introduce another installer to XCI
    - TF can definitely benefit from this; related to OPNFV work, but is a separate thing
- DM: AL should reach out to Fatih & start a dialogue
  - Try to reach an agreement on the architecture
  - Then can take that to the TSC
- AL: Sure, but who's driving this?
  - Randy needs to decide on additional resources (2-3)
  - AL will be at Kubecon, could chat with Fatih then
- DM: OPNFV context
  - TSC + Projects, no real working groups in this project
  - So Fatih, as PTL of the XCI project, to figure out the architecture but is open to input
    - Therefore Fatih is driving it for the architecture
  - AL will start coordinating with Fatih as soon as he gets a green light from Randy

## Minutes

See above

## Action items

- ☑ VM (Vicky) Brasseur (she/her) will ask Randy to coordinate with Alex about committing developers for this
