2019-04-16 Infra WG Meeting notes

Date

16 Apr 2019

Attendees

- VM (Vicky) Brasseur (she/her) Juniper
- Will Stevens, CloudOps
- Daniel Pono Takamori LF
- Alex Levine, Progmatic
- Anda Nicolae Lenovo
- Sukhdev Kapur Juniper
- Carlo Contavalli Juniper
- Andrey Pavlov, Progmatic

Agenda

- Review action items from 2019-04-09 Infra WG Meeting notes
- Update on Vexxhost (pono & Alex)
- Update on repo/committer lists (Sukhdev)

Minutes

- Sukhdev Kapur Committer list, still on hold
  - blockers: management trying to figure out timeline, uncomfortablility with moving to TF and moving things into the community
  - Also working with project management on transferring tickets to the TF Jira
  - swill: Shouldn't be a blocker on the committer list; need that to move forward with CI setup
    - SK: Have a list, but a lot of the people on it aren't at Juniper anymore; need to review/edit it
    - SK: Also delayed by question of whether to split repos
      - For instance, controller repo is overloaded with 4-5 separate projects in it
  - swill suggests starting with "people who have committed in past 6 months"
  - Alex: List of committers is not critical path; can wait on it for a few weeks
- Parallel build setup (Alex)
  - In good shape, everything moving well
  - Ready to start moving to Vexxhost once have that ready to go
  - At that point, will have PoC Vexxhost, can then start with the committers & repos
    - Will be about a month
- Vexxhost
  - pono & Andrey are coordinating on transferring the credentials (requires GPG)
  - But things are moving OK
- What are the outstanding pieces, what's the timeline?
  - The Progmatic project plan
  - Prepare the CI/CD pipeline infra (Progmatic is on this; it's on track)
    - CI, Gerrit, Zuul
    - Will copy the repos & rename them for testing
    - Then can work with real repos; need committers at this time
  - Automate more tests (Progmatic is on this; still looking at what it'll entail)
    - Won't have this complete at first; will still need manual testing from Juniper still
    - Will be unstable nightlies
      - Fixing the mismatch of manifest & container problem, packaging manifest with build artefact
        - swill offers to test this when it's ready
    - Will work with Marcus in Juniper to estimate and automate these
  - Set up the Gerrit with the committers
  - Move the Jira tickets
  - Establish Jira workflow (bugs, blueprints)
  - Move the repos
- Timing?
  - SK says that once the CI/CD is ready to go, can do the rest within a week
    - Estimates everything could be done within 4-ish weeks
    - But SK will need permission internally to make the move
- Next week
  - Get update on parallel pipeline
  - May not need update on other bits yet
  - May be a short call, but still important to keep meeting regularly

Action items

- [x] Randy Bias Talk to Bikash. Sukhdev needs more support & permission to release the information he has now.
- [x] Will Stevens Summarise the manifest-container thing for the TSC
